

GS1-R™

Serum-free Derivation & Ground State Maintenance of Authentic Rat Embryonic Stem (ES) Cells

SC Proven cell culture products undergo rigorous quality control procedures before release. The SC Proven stamp is your assurance that the product you receive has met our high standards of quality.

The #1 Formula for Germline Competent Rat ES Cells

GS1-R is the first defined, serum-free cell culture media formulation shown to enable the derivation and long-term maintenance of authentic germline competent rat ES cells without the addition of cytokines or growth factors.^{1,2}

Containing selective small molecule inhibitors that act to eliminate differentiation-inducing signals and promote cell survival, GS1-R is an ideal reagent to accelerate your research with rat ES cells.

Let GS1-R speed your efforts to achieve superior human disease modeling.
